

METOS 700 ELECTRIC RANGES

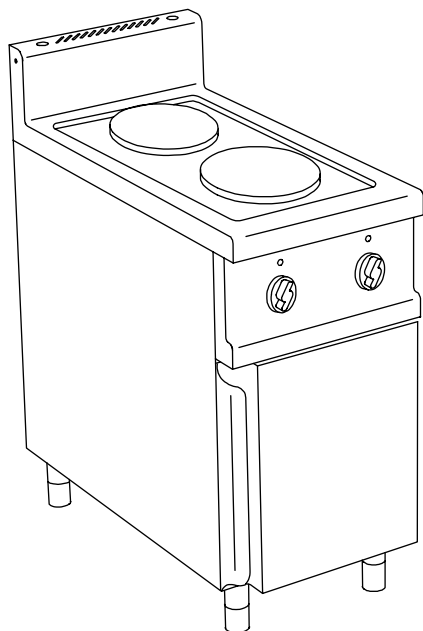

Metos electric ranges are manufactured in 18/10 stainless steel, with a 1.2 mm thick top plate. The top surface is rounded and folded down toward the recessed control panel, where the control knobs are fitted with the necessary seals to prevent moisture infiltration. The hotplates are also recessed into the top plate to collect spills and overflow.

The hotplates, made of cast iron, are available in both square and round shapes. They are operated by individual control knobs with 6 cooking levels.

As for the base unit, there are several options available. One can choose an open or closed base, or opt for an oven base, available in both electric and gas versions.

In addition to the oven option, it is also possible to choose a heated cupboard as the base unit. This can be heated from 30 to 90°C by means of electric he
